

SENEBOGEN®

PURPOSE-BUILT MATERIAL HANDLERS FOR

WASTE & RECYCLING INDUSTRIES

TRANSFER STATIONS

RECYCLING

WASTE PROCESSING

Reliable Solutions for Waste & Recycling Handling Applications

The waste and recycling industries never sleep!

The endless stream of commercial, industrial and municipal waste and other materials to be recycled calls for dependable, efficient equipment that can keep pace and meet diversion targets. SENNEBOGEN provides proven solutions to move more material efficiently, tirelessly, while reducing costs and maintaining a safe work environment.

Landfills

- Simple, computer-free design assures dependable continuous service with minimal downtime
- High strength, long reach, and fast duty cycles keep truck lines moving smoothly.
- Resist dust, grit, and heat with flow-through cooling, smart hydraulics and automatic reversing fan

Materials Recovery Facility

- Precise responsive control for efficient picking and sorting
- Quiet operation, clean Tier 4 Final emissions for safe operation indoors
- Available with optional zero emissions eGreen Electric motor and PowerPack
- High-speed mobility between work stations for multi-tasking flexibility

Transfer stations

- Large windows, dual safety cameras, elevating cab exceptional visibility in high traffic zones
- Limit switches and guarding protect operators and facilities from damage
- Compact footprint, long reach, and 360° loading to maximize productivity in confined work areas

Purpose-built from the ground up

SENNEBOGEN is the industry's preferred choice for:

Safety

Our "safety first" engineering leads the industry with factory-standard features including compact swing radius, sliding door entry, bulletproof glass, permanent catwalks, dual safety cameras and clear 360° visibility; plus custom limit switches and stops to simplify indoor operations.

Operating Cost

Long-life engineering and standard off-the-shelf service parts combine with innovations in both diesel and electric power systems to let you meet the most rigorous environmental standards while you cut operational costs for fuel, downtime and maintenance.

Production

Built to move more material faster, SENNEBOGEN leads the new generation in waste and recycling handling equipment for smooth, precise handling, fast cycle times and efficient throughput.

Flexibility

Our modular engineering and manufacturing allow us to meet your application needs with machines built-to-order according to your choice of boom & stick configuration, undercarriages and mounts, diesel and/or electric power, and custom features for specialized applications.

Service & Support

America's most complete inventory of material handler service components backed by the nation's largest network of factory-trained technicians ensures ready access to the parts and skills you need to keep your machine producing.

Simplicity

Our focus on simple structural and hydraulic design, without "black box" electronics, ensures maximum uptime and easy care for operators and technicians.

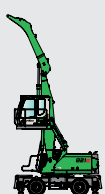

Built-to-order models from 44,000 to 900,000 lbs.

- Maximum reach from 30'6" to 140'
- Wheeled (M) and Tracked (R-HD) models

America's headquarters for material handler service and support

SENNEBOGEN LLC, based in Stanley, NC, was established in 2000 to support dealers and customers throughout the Americas.

PURPOSE-BUILT FROM THE GROUND UP

OUR FACILITY

Our 100,000 sq. ft. head office houses America's largest inventory of material handler parts and components along with our state-of-the-art Training Center and application support offices.

TRAINING CENTER

Offering hands-on instruction to dealers and customers at no cost, the SENNEBOGEN Training Center has graduated more than 1,000 technicians in specialized maintenance and troubleshooting procedures.

PARTS WAREHOUSE

From service parts and "uptime kits" to complete boom assemblies, our warehouse maintains a 98.6% fill rate for every SENNEBOGEN machine currently in service.
